Dolley washer

Benefits

Effective, space saving washing machine, specifically designed to clean hatcher dolleys thoroughly. A spray nozzle system ensures that the high pressure hot water spray reaches all areas of the dolley inside and out, while an automatic transport system ensures the continued infeed of dirty dolleys. Hot water can be supplied by the washer's integrated electrical heating system, or by using a heat exchanger in combination with the hatchery's hot water supply. Click-on nozzles are easily replaced for ease of maintenance and the machine's durable stainless steel design delivers durability and long lasting performance. The washer can be installed with a ramping system for easy loading or at a lowered height for floor level in- and outfeed. Thorough and effective cleaning for moderate pollution levels.

How it works

- A dirty dolley is positioned on the infeed of the washing machine, where it is automatically picked up by the transport conveyor
- The conveyor moves the dolley automatically through the washing machine at a constant speed, where it is cleaned thoroughly inside and out and into the corners with hot, pressurised water
- After washing, the dolley is automatically pushed out of the machine, ready to be re-used

Effective, space saving washing machine, specifically designed to clean hatcher dolleys thoroughly

Technical Specifications

Capacity	> 100 dolleys /hr
Pump	> 7.5 kW
Heating element	> 9 kW
Tunnel width	> 6370 mm
Machine length	> 1450 mm
Machine width	> 1840 mm (incl. control panel)
Infeed/Outfeed	> with ramp or at floor level (requires lower floor level at machine area)
Tank capacity	> 220 litre
Electrical power	> 17 kW
Water connection	> 1/2"
Drain	> 1 1/2"
Noise level	> 78 dB
Wash/rinse temperature	> 50-60 °C
